## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 9-16 are rejected under 35 U.S.C. 102(b) as being anticipated by Eck et al. (USPN 5,753,733).

Eck et al. teach a polymer powder compositions (see example 1) based on mixed polymers of vinyl acetate, ethylene and an acrylate and based on polyvinyl alcohol as a protective colloid, sodium formaldehyde sulfoxylate salt being contained therein, and 10 percent by weight calcium or magnesium carbonate salt being added directly after the spray drying.

Eck et al. also discloses the use of these compositions in chemical building products, or in joint mortar, in conjunction with cement (see claim 10).

Thus, the requirements for rejection are met.

3. Claims 9-16 rejected under 35 U.S.C. 102(b) as being anticipated by Geissler (USPN 6,331,587).

In examples 1 and 3, Geissler teaches the production of polymer powder compositions that are redispersible in water and based on mixed polymers of vinyl

acetate, vinyl ester of versatic acid, butyl acrylate and two protective colloids of partially saponated polyvinyl alcohols with Hoppler viscosities ranging from 1 to 30 and a degree of hydrolysis of 80 to 98 (see claim 4), the compositions containing sodium acetate salt.

Geissler teaches the use of these compositions in chemical building products in conjunction with cement (col. 4, lines 7-24).

Thus, the requirements for rejection are met.
